Now in its third edition, this bestseller has remained popular, relevant, and a must-read for new teachers, mentors, administrators, and staff development professionals. Appropriate for individual or collaborative study, this book provides simple, practical solutions to the challenges experienced by both new and veteran teachers, including: □ managing the classroom; □ handling discipline problems; □ dealing with challenging students, coworkers, and parents; □ planning lessons effectively and managing time wisely; □ accommodating individual differences in students; □ getting students excited about learning; □ and much, much more. In this new edition, you'll find advice on incorporating technology into your lessons and using social media to connect with others. You'll also find new Ask Yourself questions (following each of the 101 Answers) and Chapter Highlights to help you apply the ideas in your own classroom. These resources are available in the book and on our website for easy download. Though written for new teachers, the book's practical, easy-to-implement strategies will appeal to teachers of any grade level, subject area, or level of expertise, as well as to mentors, induction coordinators, or anyone seeking to find answers to classroom challenges and improve teaching skills.

Aims to provide advice for the design and management of urban sewerage and drainage systems to reduce the impacts that arise when flows occur that exceed their capacity. This book includes information on the effective design of both underground systems and overland flood conveyance.

This book focuses on various types of bioactive compounds, including secondary metabolites, oligosaccharides, polysaccharides, flavonoids, peptides/proteins, carotenoid pigments, quinones, terpenes, and polyunsaturated fatty acids, and presents an overview of their nutraceutical activities. It covers the current status and future potential of food compounds, as well as extraction technologies for bioactives derived from plant, fungi and marine-derived bioactive agents. Finally, health-promoting effects of plant, fungi and marine-derived bioactive agents are discussed. Chapters come from top researchers in this area from around the globe. The volume caters to the needs of undergraduate and post-graduate students in the area of food biotechnology, food bioprocessing, biotechnology, food engineering, etc., and also contains information pertinent to researchers.

Chaetomium genus was established by Gustav Kunze in 1817. According to Index Fungorum Partnership, there are 273 Chaetomium species accepted till now. Members of the genus Chaetomium are capable of colonizing various substrates and are well-known for their ability to degrade cellulose and to produce a variety of bioactive metabolites. More than 200 compounds have been reported from this genus. A huge number of new and bioactive secondary metabolites associated with unique and diverse structural types, such as chaetoglobosins, epipolythiodioxopiperazines, azaphilones, depsidones, xanthonones, anthraquinones, chromones, and steroids, have been isolated and identified. Many of the compounds have been reported to possess significant biological activities, such as antitumor, antimalarial, cytotoxic, enzyme inhibitory, antimicrobial, phytotoxic, antirheumatoid and other activities. Chaetomium taxa are frequently reported to be cellulase and ligninase producers with the ability to degrade cellulosic and woody materials. This is the first, comprehensive volume covering Chaetomium genus in detail. It includes the latest research, methods, and applications, and was written by scholars working directly in the field. The book also contains informative illustrations and is fully referenced for further reading.

This volume examines the applicability of landscape urbanism theory in contemporary landscape architecture practice by bringing together ecology and architecture in the built environment. Using participatory planning of green infrastructure and application of nature-based solutions to address urban challenges, landscape urbanism seeks to reintroduce critical connections between natural and urban systems. In light of ongoing developments in landscape architecture, the goal is a paradigm shift towards a landscape that restores and rehabilitates urban ecosystems. Nine contributions examine a wide range of successful cases of designing livable and resilient cities in different geographical contexts, from the United States of America to Australia and Japan, and through several European cities in Italy, Portugal, Estonia, and Greece. While some chapters attempt to conceptualize the interconnections between cities and nature, others clearly have an empirical focus. Efforts such as the use of ornamental helophyte plants in bioretention ponds to reduce and treat stormwater runoff, the recovery of a poorly constructed urban waterway or participatory approaches for optimizing the location of green stormwater infrastructure and examining the environmental justice issue of equitable availability and accessibility to public open spaces make these innovations explicit. Thus, this volume contributes to the sustainable cities goal of

the United Nations.

A comprehensive guide to environmental and wildlife volunteer programs throughout the world. This unique site-by-site guide profiles more than 300 programs where volunteers can work in a variety of activities involving conservation and study of wildlife. From the Fur Seal Project of the Earthwatch Institute in St. George Island, Alaska, or identifying and tracking wildlife in the Limpopo Nature Reserve, South Africa, to Blue World Institute's Adriatic Dolphin Project in Croatia, to the tracking program of the Open Minded Project in Kaeng Krachan National Park, Thailand, readers will learn the best ways to "give back" and make the most positive environmental impact during their travels. Each entry includes a profile of the site and organization behind it, as well as location, contact information, category, costs, dates and duration, how to apply, and field notes that include any special concerns, requirements for participation, and suitability.

This work takes a real-world, single focus company approach in every chapter. The decision-making focus shows the relevance of financial accounting regardless of whether the student has chosen to major in accounting.

Believing that transformation is possible and that it must come from within, Clar Doyle illustrates the vital connection between drama and critical pedagogy. Presuming that a practice informed by the theory of critical pedagogy is essential to achieve an emancipatory education, Doyle shows how well drama and aesthetic education can encourage a pedagogy that is critical. He explores the real as well as the perceived values and understandings given to the aesthetic in school settings, how tastes and awareness are produced and how students' backgrounds inform the way in which art and drama are experienced. Furthermore, Doyle shows the ways in which the dominant cultural agencies rob both teachers and students of creativity through their reproductive policies. The book explores such critical questions as: the nature of culture; the historical place of drama within education; and the debate between drama and theatre as it applies to schooling. With a critical perspective, he reviews the current status of drama education and suggests ways in which educators can redefine their mission and refine their practice. By examining the influence of the culture industry and the issues surrounding style choices, Doyle highlights the challenge that teachers must meet in order to use performance skills to tease out attitudes and understandings. He concludes by showing how drama can help students, not only to bring about change in their own lives, but to effect change in the world around them.
